Product Description

Advantages

Our

- Customized fit for improved comfort
- Natural-looking appearance
- Enhanced stability during speaking and eating
- Durable and stain-resistant material
- Restores facial support and aesthetics

Key Features

****Customized Fit:**** Our skilled technicians work closely with dentists and patients to create custom-fitted dentures that ensure optimal comfort and functionality. Each denture is individually crafted to fit the unique oral anatomy and preferences of the patient.

****Natural Appearance:**** Full acrylic dentures are designed to resemble natural teeth and gums, providing a natural-looking smile. The acrylic material used in the dentures can be color-matched to the patient's remaining teeth or desired shade for a seamless blend.

****Enhanced Stability:**** Full acrylic dentures utilize the natural suction and support from the underlying soft tissues, ensuring improved stability during speaking and eating. The dentures are carefully designed to distribute forces evenly and minimize discomfort.

****Durable and Stain-Resistant:**** The acrylic material used in our dentures is known for its durability and resistance to staining, ensuring long-lasting aesthetics and ease of maintenance.

****Restoring Facial Support:**** Full acrylic dentures not only replace missing teeth but also help restore facial support and shape. They provide essential support to the facial muscles, enhancing facial aesthetics and preventing a sunken appearance.

Indications

- Complete tooth loss (edentulous arch)
- Replacement of existing dentures

Considerations

- Full acrylic dentures may require periodic adjustments or relining to maintain an optimal fit as the oral tissues change over time.
- Proper oral hygiene and regular dental visits are essential for maintaining the health of the supporting oral tissues.
